

Charlie Crist
Governor

Ana M. Viamonte Ros, M.D., M.P.H.
State Surgeon General

INTEROFFICE MEMORANDUM

DATE: May 5, 2008

TO: County Health Department Directors/Administrators

FROM: Jean L. Kline, R.N., B.S.N., M.P.H.
Deputy Secretary for Health - Public Health Programs
State Public Health Nursing Director

SUBJECT: Assessment of County Health Department
Clinic Immunization Coverage Levels (2008)

INFORMATION ONLY

In March 2008, the annual county health department (CHD) assessment of immunization coverage levels for one- and two-year-old children receiving services in their facilities was completed. The CHD data was extracted from the Florida State Health Online Tracking System (SHOTS) and contained all active records of children 12 to 23 months of age and children 24 to 35 months of age, with a common review date of January 1, 2008.

This year's assessment results, based on the Advisory Committee on Immunization Practices (ACIP) recommended doses, revealed that 82% of CHD clients completed the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 Hep B, and 1 Varicella series (4/3/1/3/3/1) by 24 months of age. This is a 5% increase from last year. Along with the increased overall state coverage rate, thirty-two counties had coverage levels over 90%, with eight of these CHDs attaining 100% immunization coverage levels for two-year-olds. CHDs are to be commended on their hard work in protecting Florida's children against vaccine-preventable diseases.

While the immunization coverage levels for two-year-olds have increased from last year's rate, CHDs must continue to focus their efforts on children 12 to 23 months of age. The assessment of this cohort of children in the public sector, as portrayed in Attachment 2, shows that 78% completed 3 DTaP, 2 Polio, 2 Hib, and 2 Hep B vaccines by 12 months of age.

This survey data shows that the failure to administer the fourth dose of DTaP is one of the main reasons we have not achieved the 90% coverage objective in Florida. The assessment results also identify other areas where CHDs can focus efforts to improve coverage levels. Both clinic and countywide results (Attachments 3 and 4) should serve as a critical component of ongoing quality assurance reviews. CHD staff should routinely generate assessment reports, via the Florida SHOTS, to assess coverage levels and evaluate service delivery. Assessments provide data about vaccine delivery practices and vaccine coverage that both motivate and assist staff in developing and implementing best practices. In addition, Standard 16 of the *Standards for Child and Adolescent Immunization Practices* promotes semi-annual audits to assess immunization coverage levels and a review of immunization records in the provider's patient population.

Assessment of County Health Department
Clinic Immunization Coverage Levels (2008)
Page Two
May 5, 2008

To consistently exceed the goal of 90% coverage among our two-year-old children, and in working toward meeting future goals, CHDs must focus their energy and resources in the following key areas:

- Fully implement the CHD Guidebook's immunization internal operating policies and technical assistance guidelines.
- Develop effective strategies for achieving high, sustainable vaccine coverage levels.
- Assess the impact of intervention and service delivery practices.
- Use all clinic encounters to assess immunization status and provide appropriate immunizations.

Additionally, we encourage you to contact your Bureau of Immunization Field Staff to assist with identifying areas of need and develop strategies for increasing your immunization rates.
